

Milk Feeding Tray Datasheet JUNE 2017

Our milk trays are used to feed piglets. The design is strong and rigid, fully welded in stainless steel, making it easy to clean. The link and cross separators ensure the piglets not go into the tray. The tray is mounted into floor grooves by T hooks in a strong and double sided design (with a spring load securing). The top of the hooks come with a large hook handle, enabling maximum convenience.

The tray is available in 4 sizes, 0.5、1.0、1.5 and 2.0m length, as well as hooks in 220mm、280mm and 400mm for different flooring types.

You can find some related videos on YOUKU or www.farmnology.com.

Size:

(1) 0.5*0.21*0.165m, for 4 piglets to drink milk at the same time.

(2) 1.0*0.21*0.165m, for 8 piglets to drink milk at the same time.

(3) 1.5*0.21*0.165m, for 12 piglets to drink milk at the same time.

(4) 2.0*0.21*0.165m, for 16 piglets to drink milk at the same time.

"T"shape hook 220mm, for dung leakage plate with thickness of 20-65mm

"T"shape hook 280mm, for dung leakage plate with thickness of 65-105mm

"T"shape hook 400mm, for dung leakage plate with thickness of 105-200mm
