

Multi Outlet Water Tower  
Datasheet  
JUNE 2017

A multi outlet water tower is used as a water source for piglets. 4 piglets can drink water with it at the same time.

Water from the outlet tower does not release until the piglets mouth comes in contact. This also reduces water waste. When the piglets need to be fed medicine, the tower can be used to avoid medicine waste.

This multi outlet water tower is fully welded with stainless steel and is corrosion resistant even in an environment such as pig farms.

Material Stainless steel

Size: 375\*375\*1870 mm

Outlet quantity: 4
