

Piggytrim Datasheet DATASHEET JUNE 2017

Piggytrim is a safe tool to assist systematic care and hoof trimming of sows. Piggytrim operates by letting the sow to go into the box, after which she is hoisted up lying on her stomach with the legs on either side of the longitudinal tubes. The sow calms down when the floor disappears beneath it, and you can work undisturbed with the hoof care. Manufacture by Farmnology in China, design by Farmnology in Danmark.

Material: Galvanized steel.
Max load: 500KG

Outside dimension: 2200*730*1200 mm(710KG)
Inside dimension: 2000*490*1070 mm

Users should following safety protection and tools during operation. Users should also read the operation manual before usage.

Easy operation:

Please ensure that the piggytrim is placed in the stable in relation to the internal logistics.

- 1) Open the door and let a sow enter 2) Close the door and lift the box with the sow.

- 3) Make hoof trimming for sows with pliers and a grinder.
